SUMMARY

I am a third-year Computer Networks and Data Communications student, I am an automation tester with hands-on experience in building automated testing frameworks using Selenium WebDriver, TestNG, using Java programming language. I have successfully implemented test automation for web applications like OrangeHRM and CMS, focusing on e-commerce and system administration functionalities. Besides, I also have skills like API testing with Postman, database validation with SQL, and knowledge of using Jira project management tool. Additionally, I have explored and have knowledge of Android Studio, VMware for virtualized environments. With a proactive learning mindset and good adaptability, I am committed to full-time work, comply with company regulations. I am eager to contribute to quality assurance initiatives for the project, enhancing my expertise to deliver robust testing solutions and grow in a dynamic engineering environment.

EDUCATION

Bachelor of Engineering - University of Information Technology (HCM VNU)

Junior Computer Network and Data Communication Student

Expected March, 2026

GPA: 7.75/10

PROJECT

OrangeHRM Automation Testing

GitHub: <https://github.com/letrunghung170604/ORANGEHRM-CVPROJECT.git>

Tech stack: Selenium WebDriver, TestNG, Java, Log4j, Apache POI, Monte Screen Recorder, Allure Reporting

Designed and implemented an automated testing framework for the OrangeHRM web application, focusing on Admin and PIM modules.

- Automated test cases for user management (add, edit, delete), job titles, job categories, employment status, and locations.
- Verified product status after adding, editing, or deleting in both cases with a search function (validating search results) and without a search function (checking the entire list).
- Developed data-driven testing using an Excel file and integrated parallel execution with TestNG.
- Configured logging with Log4j, captured screenshots for failed tests, recorded videos with Monte Screen Recorder, and generated reports with Allure Reporting.

CMS Automation Testing

GitHub: <https://github.com/letrunghung170604/CMS-CVPROJECT.git>

Tech stack: Selenium WebDriver, TestNG, Java, Log4j, Apache POI, Monte Screen Recorder, Allure Reporting

Built an automated testing framework for the CMS web application, focusing on e-commerce functionalities.

- Automated login, profile management, product information retrieval (saved to Excel), cart operations, and the checkout process (cart, shipping, delivery, payment, confirmation).
- Developed data-driven testing using an Excel file and integrated parallel execution with TestNG.
- Integrated parallel execution, logging, video recording, and generated reports with Allure Reporting for comprehensive test coverage.

SKILLS

- **Automation Testing:** Selenium WebDriver, TestNG
- **API Testing:** Postman
- **Programming:** C++, Java, C#
- **Other skills:**
- **OS:** Windows, Linux
- **Database:** SQL
- **Project Management:** Jira
- **Mobile Development:** Android Studio
- **Virtualization:** VMware
